

Uncertainty-Based Competition Between Prefrontal and Dorsolateral Striatal Systems for Behavioural Control - Notes

Richard Maskell - 1238287

June 24, 2015

1 Document Summary

This article by Daw, Niv Dayan assumes different neurological systems used for behavioural choice. One associated with the prefrontal cortex (which is said to make use of past experience) and another with the dorsolateral striatum (**which is said to be more simplistic?????**).
